

Sticker artwork made simple

A beginner-friendly upload guide for PNG, JPG, PDF and design files

PNG / JPG

Upload your clean artwork only. Do not add pink, blue or cyan cutlines to the image.

The easiest way to order

1

Choose your Sticker type

Pick Die Cut, Labels or Sticker Sheets and enter the finished size.

2

Upload clean artwork

PDF is best. PNG, JPG, TIFF or PSD is also fine. Use a high-quality file.

3

We prepare the cut

Pleeko adds the right cutlines and checks the file before production.

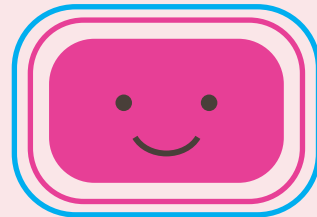

What your upload should look like

READY TO UPLOAD

Artwork only.
Transparent background if the design has no printed background.

PLEASE REMOVE THE LINES

Remove both coloured lines from a PNG/JPG.
They may print as part of the artwork.

Pleeko prepares:

● cut shape

● outer cut

● bleed check

● production setup

We will contact you if the artwork needs a change before it can be printed.

DESIGNERS ONLY

Want to supply editable cutlines yourself?

- PDF, AI, SVG or EPS only - not a flattened PNG/JPG.
- Use clean, closed vector paths with no gaps or double lines.
- 1 pt magenta for kiss cuts; 1 pt cyan for outer cuts.
- Use a separate top layer named Cutlines; keep every path editable.

Never merge coloured cutlines into the printable artwork.

Not sure? Upload clean artwork and we will take it from there.
